QuadShine Tech and Ventures | Junior Software Engineer

Sept 2021 – March 2023

Projects

1. Inventory Management System

Inventory Management system has functionality of controlling, storing and keeping track of inventory items. Inventory management is an essential component of supply chain management, as it regulates all the operations that are involved from moment an item enters store until it has been dispatched. Due to the use of barcode process of tracking the product becomes easier. A Barcode reader is used to read barcodes and look up info on the products they represent.

2. 3-domains (Educational Website)

An educational website that provides a platform for teachers/ trainers/ tutors belonging to different background in order to reach out to the parents/guardians/clients looking for their children tutor/ trainer.

3. Invoice Billing Software

An invoice billing software is an itemized commercial document that records the products or services delivered to the customer, the total amount due, advanced payment, tax, discount and the preferred payment. The seller can send either hardcopy invoices or softcopy invoices to the customer.
